### **Count-down to Uppsala Health Summit 2022 - Join us!**

The students have returned to Uppsala and the city is full of life again. Our programme committee and secretariat is also busy, gearing up to finalize the plans for our next summit "Healthy Lives from Sustainable Food Systems" October 25-26.

The Summit will bring together some of the world's leading minds on how to meet the global health challenges associated with how and what we eat, for the health of the planet and ourselves.

Our plenary programme will be live-streamed and the link will be shared on our website. Please find the full programme here.

**Interested in joining the summit as participant?** Register and see the full list of workshop speakers and topics here!

We are continuously updating our website with programme information and interviews. We are looking forward to welcoming you in person to Uppsala or to meet you online!

### **Join the summit in an online workshop!**

This year we will hold one of our workshops online allowing people from all over the world to join. The workshop, "Zero hunger: is smallholder farming the solution?" is a workshop where we invite researchers, policymakers, and international organisations working with agriculture and food systems to discuss the future of smallholder farming, if sustainable small-scale agriculture can be achieved and whether sustainable industrialization is desirable. This excellent workshop is a collaboration between six experts from three research institutions; the National Veterinary Institute (SVA), the Swedish University of

Agricultural Sciences (SLU) and Uppsala University.

This workshop will take place at 11.30 - 16.15 (CET) on the 25th of October. The workshop is free of charge.

### **New partnership with Örebro University!**

We are thrilled to announce that Örebro University is a new partner to Uppsala Health Summit. With

their long-term strategic initiative Food and Health, Örebro University will contribute in practical terms to this year's theme, Healthy Lives from Sustainable Food Systems.

"Uppsala Health Summit has evolved into a key arena for advanced discussions on the interplay between science and policy in broad health issues. Örebro University can contribute with strong research within a number of fields," says Johan Schnürer, vice-chancellor of Örebro University

This new partnership also brings advantages for Örebro University, he says:

"This collaboration has the potential to expand our contacts with the two universities in Uppsala, as well as with government authorities at a national level. It will also allow us to build new exciting international networks. Örebro is one of seven universities in Sweden with a faculty of medicine and our particularly strong research within environmental chemistry, ageing, and not least AI and robotics is sure to contribute to future Uppsala Health Summits"

"In the process of drafting new policies, Örebro University can contribute expertise from a range of fields relating to health," Johan Schnürer concludes.

## Meet Marmar Nekoro, one of the workshop leaders for the upcoming Summit

Marmar Nekoro leads the workshop *Reducing Antimicrobial Resistance for Healthy and Sustainable Food Systems*. Read the interview with Marmar where she tells us about her reflection on the public health issues surrounding unsustainable food systems, critical changes that need to be made, and inspiring reflections based on her past experiences.

*"I hope that we succeed in proposing actions to further develop antimicrobial stewardship policies and collaborative partnerships to implement the needed changes"*

## The Diet-Environment-Health Nexus with Alicja Wolk

Read this interview with Alicja Wolk where she reflects on the workshop topic, tells us about her research background and ongoing projects.

*"In my opinion, the most urgent concerns and challenges related to dietary patterns in Sweden and in general in developed countries are too low consumption of plant-based food (whole grains, vegetables, fruit, legumes), too high consumption of some animal-based food (processed meat, red meat, dairy) and too high and increasing consumption of processed food."*

## Meet some of our plenary speakers

**We are proud to welcome high-profile speakers from all over the world to our plenary sessions and workshops. Our website is continuously updated with bios as more speakers confirm their participation.**
