Summing up the summit

The theme for the Uppsala Health Summit in March this year was **Antimicrobial Resistance and Behaviour Change**. Like so many other meetings this year the summit was digital due to the Covid-19 pandemic.

The meeting was an opportunity for deep reflection and dialogue on how we should approach the antimicrobial resistance crisis with greater focus on the social and behaviour factors. What strategies are needed to help individuals and organizations adopt behaviours and practices that will help safeguard our medicines?

Over 600 attendees logged on and stayed for an average of 400 minutes to learn from our stellar speakers and to participate in workshops. Topics focused on different part of the AMR puzzle, including how to reframe messages around resistance for better effect and how to guide practices towards better stewardship and fair access through improved incentives.

We walked away from the summit with a sense of being part of a movement for greater role of social and behavioral sciences, and for creating a real sense of urgency in society for an issue that concerns us all.

A post-conference report summarizing the conclusions from workshop in a science-to-policy format is in the making and will be disseminated in mid-June.

We thank our speakers!

We are so proud of our speakers, and they all addressed the AMR-agenda with such insightful perspectives. On the last day Professor Cass Sunstein - author of NUDGE: Improving Decisions about Health, Wealth and Happiness - shared a FEAST framework for Change. You find this presentation and all the others on our website.

THE AMR Studio Special Podcast on Behaviour

Ahead of our summit, the advocacy organization on antibiotic resistance ReAct partnered with Uppsala Antibiotic Centre and Uppsala Monitoring Centre to plan a workshop together at our Summit. This teamwork resulted in a discussion on how to communicate about AMR for greater reach and effect, and also a joint podcast with three of our distinguished speakers.

Episode X7

Otto Cars on the current status of AMR
Eldar Shafr on how context affects decision making
Vanessa Carter on patients' stories and advocacy
