

Conclusions from Workshop

*Long term care for cancer
survivors*

PATIENT FOCUS AND PATIENT DRIVEN

- **Bring the patient perspective (actively)**

Engage patients in the development of guidelines and healthcare services

- **Importance of social network**

Importance of including family members, community.

- **Use of technology**

Technology support should be patients' needs driven

HEALTHCARE SYSTEM

- **Leap into Late effect planning**

Countries that are struggling with access to good cancer treatments and to medicines may in parallel develop late effects systems to work with survivors – an opportunity for many low and middle income countries.

- **Don't reinvent the wheel**

Incorporate ideas and solutions that work in other areas of public health
example: e.g. stroke rehabilitation

- **Have a holistic approach**

Multidisciplinary and multi-professional teams are needed

Include societal issues: insurance, work
